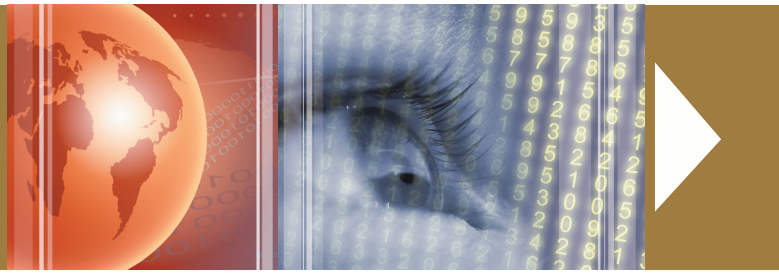
RAZ-LEE™ The iSeries Security Experts | iSecurity™ IBM Business Partner IBM Server Proven™

# Anti-Virus



## Product Description

Raz-Lee Security's new Anti-Virus module, part of our iSecurity suite, offers total protection for the iSeries against viruses, Trojan horses, and malicious code. Anti-Virus scans all accessed files, offers comprehensive virus detection by marking, quarantining and deleting infected files, and prevents your iSeries from becoming an infection source. No effective security policy is complete without Anti-Virus.

## New from Raz-Lee

Anti-Virus now comes with a Java-based GUI interface, making implementation and maintenance even easier!

## The Anti-Virus Solution

Until just a few years ago, the iSeries was used almost exclusively in a closed environment, and the OS/400 operating system provided the strongest data and system security in the world. But times have changed. In today's world of PCs, distributed databases, the Internet and web technologies, closed computing environments are all but extinct. Technological advances opened up the iSeries to the rest of the world, but in the process, brought with it many of the security risks inherent in distributed environments, leading to a shocking discovery. Although the iSeries AS/400 doesn't run. exe files, it can house infected files – where they can wait, silently and deadly, until someone on the network transfers and opens that file on their PC. Anti-Virus enables you to fight viruses using a specially designed, comprehensive, and user-friendly product. Working extremely fast, Anti-Virus user-friendly interface incorporates the most intuitive activation features on the market, helping to keep viruses away from your network and your PC.

## Features

- Automatic, regularly updated database
- Command-line scanner
- Database updater with support for digital signatures
- Can not be disabled by viruses
- On-Access and On-Demand scanning
- Built-in support for zip, gzip, jar, and tar files
- User-friendly, multilingual interface (green screen and GUI) with simple activation features
- Supports V5R3 Scanning Enablement
- Integration with OS/400 Scheduler
- History Log for review and analysis

## Benefits

- Prevents your iSeries from becoming an infection source
- Scans files before and/or after they are used
- Built-in scheduler enables planned virus scanning
- Based on a popular signature file used in the Open Source (Linux) environment
- Signature file is often updated even before some of the commercial files
- Signature file loaded directly from the web into the iSeries or from a web-connected PC which disconnects from the web upon iSeries access
- User-friendly green-screen and GUI interfaces

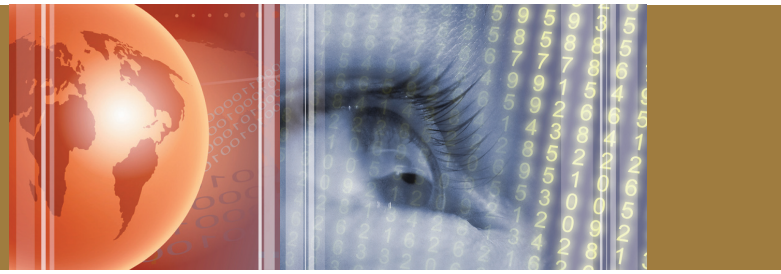
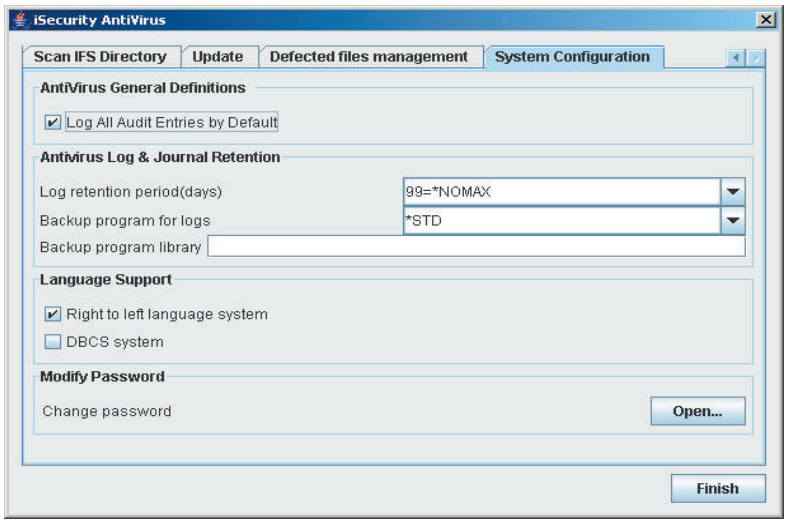
# Anti-Virus

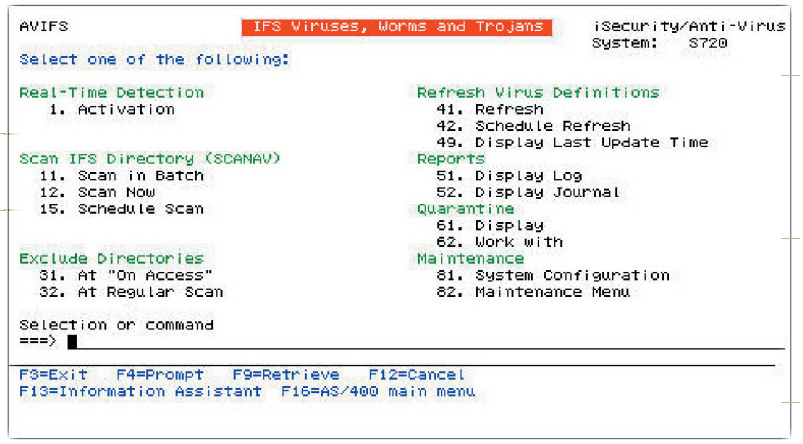




Java-based GUI provides easy navigation, activation, and usage

Activate anti-virus protection with one click

Quick, reliable scanning lets you know of possible virus infection



Make sure your database has the most up-to-date definitions

Detailed history log enables you to view scan and virus history

Quarantine keeps destructive viruses away from your files
