RAZ-LEE™ The iSeries Security Experts | iSecurity™ IBM Business Partner IBM Server Proven™

Password

Overview

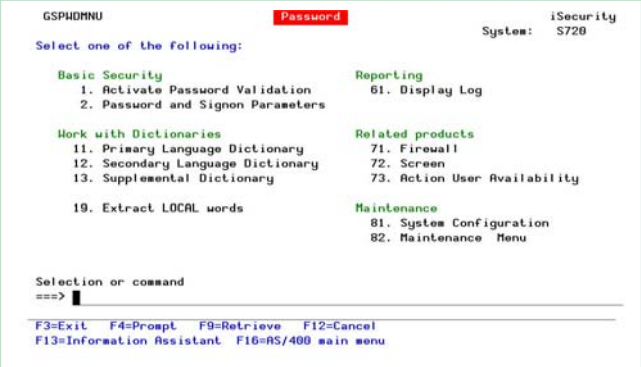
Password is a general-purpose password management product that ensures user passwords cannot be easily guessed or cracked. As the first line of defense in iSeries access security, **Password** is a necessary part of your iSeries protection.

The Password Solution

The most common method of unauthorized system access is via stolen or easily guessed passwords. Therefore, **Password** includes user-modifiable dictionaries containing thousands of common words and other text strings that are not suitable for use as passwords. It then validates all passwords that are modified using the CHGPWD command. Users cannot assign any words contained in these dictionaries as passwords.

Password also allows you to manage a variety of password security parameters and maintains a history log of attempts to create passwords. This log can easily be displayed or printed.

With **Password**, potential intruders now have one more barrier preventing unauthorized access to your system.



Password's main screen provides quick access to validation, History Log, and everything else you need to work with passwords – resulting in the minimal time spent working with this program

Key Features and benefits

- 2 dictionaries available for different languages
- Blocks attempts to use easy-to-guess passwords
- Additional dictionary useful for technical or company-specific terms
- All dictionaries are user-modifiable
- Convenient interface for password and user signon parameters
- History log of user attempts to change passwords
- Integrates with other **iSecurity** products such as **Firewall** and **Screen**
