

Raz-Lee Security Releases Numerous New iSecurity Capabilities Prior to Common US

Nanuet, New York – April 4, 2017 - [Raz-Lee Security Inc.](#), a major vendor of security, encryption, auditing and compliance solutions for IBM i (AS/400) systems, announces the availability of numerous additional functionalities in its [iSecurity suite of products](#).

Raz-Lee will be exhibiting these new capabilities and, indeed, the entire iSecurity solution suite at Common US in Orlando, May 7-9, and at Common Europe in Brussels between June 18-21.

With its constantly growing customer base, especially of large customers many having more than 50 LPARs, Raz-Lee continues adding and expanding product features for the benefit of all Raz-Lee customers.

Indeed, most of the new functionalities originated with Raz-Lee's new and existing customer base and, in the words of one customer, attest to Raz-Lee's long-term commitment to fulfill customer's requests. These are packaged into the overall iSecurity solution suite, providing tangible benefits to all.

Some of the highlights of the new functionalities include:

1. [SIEM integration](#)
 - a. Sends messages simultaneously to multiple SIEMs
 - b. Includes native support for *LEEF (IBM QRadar) and *CEF (HP ArcSight), and special SPLUNK-oriented support
 - c. Supports all network access messages, QAUDJRN system journal messages and QHST messages, including field-specific access within the original messages
2. [Report Generator & Scheduler](#)
 - a. Can incorporate any user or system command and spool file output as a report.
 - b. Supports report generator summaries of counts and values, including optional sorting of the results
 - c. Supports sorted counts and up to 3 different summary reports within each report!
3. [Real-time Action alerts](#)
 - a. Can be generated on output lines generated by reports.
 - b. Can be generated based upon the frequency of the event in any defined time period.
4. [Captured screens](#) are now automatically compressed providing huge savings in disk space and enabling full screen-based audit trails of all employees & consultants activities.
5. Ability to restrict outgoing e-mails to specific addresses and/or domains.

"Raz-Lee has once again proven its technological superiority by offering the IBM i (AS/400) market new capabilities in all of the iSecurity products, which are installed in more than 40 countries worldwide" said Shmuel Zailer, CEO at Raz-Lee Security. "Raz-Lee will continue to be attentive to user's requests and do its utmost to provide solutions which address our customer's security, auditing and compliance requirements."

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's IBM i (AS/400) midrange computers. Drawing upon its more than 33 years of expertise in the IBM i market, the company designs, develops and markets a comprehensive suite of more than 20 advanced security software solutions, iSecurity.

Raz-Lee's iSecurity product suite is field-proven at thousands of sites, ranging from sites with more than 200 systems thru SMBs and single-LPAR P05 installations, in more than 40 countries worldwide.
