

Raz-Lee Security Announces Authority Inspector – A Free solution to Minimize Threats Posed by Excessive User Authorities

Nanuet, New York – April 19, 2017 - [Raz-Lee Security Inc.](#), a leading vendor of security and compliance solutions for IBM i (AS/400) systems, announces the availability of Authority Inspector.

Authority Inspector, which is based on IBM Authority Collection, released in 7.3, assists organizations to minimize threats posed by overly strong user authorizations.

The issue of excessive user and object related-authorities in IBM i (AS/400) has received extensive press coverage recently, leading IBM to develop Authority Collection. As excessive authority settings open a potential security exposure to sensitive data which can be changed by unauthorized users, more and more companies strive to allocate authorities on an “as needed” basis only. This is not only common sense but is dictated by regulations such as SOX, PCI, HIPAA, GDPR and others.

IBM’s Authority Collection records each and every authority check, including the authority level required and the authority level defined. This leads to an extensive amount of raw data, which, according to IBM, can be investigated by using complex, manually entered SQL statements.

Such a situation calls for a dedicated application to ease the effort and provide graphical access with “point and click” capabilities.

Raz-Lee Security provides the first and only tool dedicated to this task, Authority Inspector™, the latest product in our iSecurity™ suite of solutions. Authority Inspector is an analysis tool which presents Authority Collection data in tables and graphs, summarized and counted for ease of understanding. Meaningful field titles are used and encoded field values are translated to names.

Field filters can be easily defined by selecting values from either the table of counts or from the graphical statistical image. And, Authority Inspector is installed only on the PC, making use of the Authority Collection data on the IBM i, without adding risk, overhead or additional footprints.

"Raz-Lee is once again offering the worldwide IBM i (AS/400) market unique added value and ease-of-use, to solve a very common problem at both large and small organizations. This time, Raz-Lee has decided to “pay back” the market that has made Raz-Lee, over the years, the constantly growing security, encryption, auditing and compliance company that we have become” said Shmuel Zailer, CEO at Raz-Lee Security.

"Therefore, Raz-Lee has decided to give all customers its Authority Inspector product for free, with no license or maintenance charges, during 2017! Simply visit our booth at Common in Orlando or in Brussels, get the free code and download the product from our website and enjoy...!"

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's IBM i (AS/400) midrange computers. With more than 33 years of expertise and customers in more than 40 countries, the company continues to design, develop and market a comprehensive suite of more than 20 advanced security software solutions called the iSecurity suite.
