

iSecurity User Provisioning now Available

*Supports corporate HR files
as the basis for quickly onboarding users!*

Nanuet, New York – April 29, 2015 - [Raz-Lee Security](http://www.razlee.com), a leading developer of security, auditing & compliance solutions for the IBM i (AS/400), has announced the availability of the new iSecurity User Provisioning product.

User Provisioning was developed to answer to the increasingly critical requirement of very large and mid-large companies to quickly and efficiently onboard hundreds and even thousands of users in accordance with pre-defined template wizards and user categories.

User Provisioning has been designed as an “open system” that can work with multiple operating systems; the current version of the product supports IBM i and Linux and is easily expandable to include other operating systems.

The product can populate user profile definitions based upon corporate human resource (HR) files which are mapped to the IBM i files on a per-field basis.

One of the benefits of User Provisioning is to free up Help Desk resources, while at the same time drastically reducing the number of human errors introduced into the IBM i user profile definitions. Indeed, the product has a well-defined easy-to-implement workflow which ensures painless integration into any company’s user structure.

A full product audit trail is provided and reports can be developed, scheduled and executed using iSecurity’s standard Report Generator interface.

User Provisioning is the latest addition to iSecurity’s ever growing list of user-related products which includes User Management, User Profile Compliance, Password Reset & Password Definitions, Replication and Authority on Demand.

“With our latest User Provisioning product, Raz-Lee once again proves its technological capabilities and superiority in providing professional, ready-to-market solutions; with the increasing industry awareness of user profile definitions and authorities and the need to allocate and standardize such definitions as quickly and as “painlessly” as possible, Raz-Lee is again directly addressing industry requirements”, said Shmuel Zailer, CEO/CTO, Raz-Lee Security.

About Raz-Lee Security Inc. and [iSecurity](#)

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's IBM i (AS/400) computers.
