

Raz-Lee adds new, strategic features to Authority on Demand

Nanuet, New York – October 6, 2014 - [Raz-Lee Security](#), a leading supplier of information security solutions for the IBM i (AS/400), has announced that as of August 2014 it has added numerous customer-requested features to its extremely popular [Authority on Demand](#) product.

Authority on Demand (AOD) provides a unique solution for providing emergency access to critical application data and processes, which is one of the most common security issues in IBM i (AS/400) audits. Current manual approaches to such situations are not only error-prone, but do not comply with regulations and auditor's often stringent security requirements.

Authority on Demand saves valuable time and resources, enforces segregation of duties and enables relevant personnel to obtain access to approved information when needed. Its real-time audit of access rights protects sensitive corporate assets and significantly reduces the number of profiles with powerful special authorities.

The most significant features added to Authority on Demand are:

1. The log produced at the end of each AOD session now includes (at no extra cost!) both 5250 screen images of all user screens, as well as a detailed report of all file changes initiated by the user while working under additional authority. The benefit is in complying with auditor's demands for full monitoring of all user activities, especially those of non-employees such as consultants, third-party developers, etc.
2. AOD can now be initiated and ended in batch mode as well as in interactive mode. The benefit of this user-requested enhancement is the total flexibility provided which is not based upon the job's interactive status.
3. It is now possible to export and import all AOD rules and parameters- including PIN codes- to and from all systems and LPARs in the organization. This enhancement request was initiated by a customer running AOD on many tens of LPARs.

Eli Spitz, VP of Business Development at Raz-Lee Security said: "With the additional functionalities provided by Authority on Demand, Raz-Lee expects to see ever-increasing sales of this very vital auditing and compliance-related product. The new, exciting AOD features were initiated by customers and Raz-Lee takes pride in its efforts and capabilities in fulfilling customer requests and subsequently providing these enhancements to the IBM i (AS/400) community worldwide."

About Raz-Lee Security Inc. and [iSecurity](#)

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's IBM i (AS/400) computers. Drawing upon its more than 30 years of expertise in the IBM i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven at thousands of sites, ranging from sites with more than 175 systems thru SMBs and single-LPAR P05 installations, in more than 40 countries worldwide.
