## **Instructions for downloading and installing Raz-Lee products**

1. Access the download page at:

[http://www.razlee.com/downloads/product\\_download\\_request.php](http://www.razlee.com/downloads/product_download_request.php)

2. Choose the appropriate OS/400 system, (V5R2 - V6R1 or V4R1 – V5R4.) and select the products you wish to download. If you are a “Returning User” (i.e. you signed up in the past), simply enter your e-mail address, otherwise click “Create an Account” and proceed as instructed.

3. When you have completed the above step, you will receive an e-mail confirming your request.

4. In parallel, Raz-Lee’s marketing staff will approve your request, including appropriate temporary authorization codes. You will receive an e-mail which will include:

- a link to download the product(s)
- temporary authorization code(s)
- initial operating instructions for the product(s)

5. Clicking on the link provided in the e-mail will open the “Products Download Page”. Click on the appropriate product installation link (ZIP file type) and download the file to an installation folder you define on your local disk; we advise using a short name such as c:\razlee\. You can also download and save product documentation from this page.

6. Extract the ZIP file you have downloaded into the installation folder.

7. If you are upgrading an existing product, ensure that no one is using the product at the time of installation. In addition, if the installation folder contains a PDF file, it is important to follow the instructions in this file prior to the installation.

8. In the installation folder, run the file named SETUP.BAT which will invoke the installation program in which you will be asked to:

- Choose the product(s) you are installing
- Provide the IP address of your AS/400 and a “strong” userid and password (preferably QSECOFR)

9. Following the installation, which may take a few minutes, verify that the installation completed successfully. If the installation was not successful, send an e-mail to [support@razlee.com](mailto:support@razlee.com) and attach file [FTP.LOG](#) which you will find in the installation folder.

10. Following a successful installation, invoke your terminal emulation software and follow the operating instructions provided in the e-mail you received.
11. From the product's main menu, select Option 81 (System Configuration), press F22 and enter the temporary authorization code you were sent in the e-mail.
12. Some iSecurity products request that you first enter a product password; the default password is QSECOFR.
