

## **Raz-Lee Security to Sponsor A CISO (Chief Information Security Officer) Conference in Israel**

**Herzliya, Israel** – December 7, 2009 – [Raz-Lee Security](#), a leading supplier of information security solutions for IBM Power i computers, will be a sponsor in the upcoming CISO (Chief Information Security Officer) Conference. The event will take place on Wednesday 9 December in Tel Aviv, Israel.

Raz-Lee Security will give a presentation titled "How does Tokenization Assist Companies in Achieving PCI-DSS Compliance?". The session will focus on the advantages of Tokenization for corporate data security and for minimizing the efforts invested in PCI Compliance. For instance, one major advantage of using Tokenization is that it can remove applications and databases from the scope of PCI DSS audits, yielding significant cost, complexity and time savings. In addition, the lecture will introduce nuBridges Protect - an award-winning encryption, tokenization and key management solution which Raz-Lee Security distributes in Israel – the first encryption and tokenization solution to be sold in this country.

The event will be held by the Israeli ICT (information and communications technology) forum managed by [ThePeople](#), comprising 2500 members in the fields of industry, government, medicine, press, insurance, banking, communications and more. Up to 10 events are held annually, with panels, lectures and networking opportunities.

"Israel, renowned for state-of-the-art technology, is one of our strongholds, and we are proud to sponsor a key ICT event in this country," said Eli Spitz, VP Business Development, Raz-Lee Security. "As in other areas in the world, PCI is rapidly penetrating Israeli corporate consciousness, and Israeli companies are searching for solutions which will enable them to minimize the efforts towards compliance. In this aspect, the nuBridges Protect solution we will be introducing at the CISO conference perfectly suits the Israeli market needs."

### **About Raz-Lee Security Inc. and iSecurity**

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
