

Raz-Lee Security Partners with nuBridges to Provide Advanced Encryption & Tokenization Solutions

Raz-Lee, Expert System i Security Solution Provider, Adds nuBridges Protect™ Software to Product Portfolio to Help Organizations in Israel Comply with Data Security Mandates

Herzliya, Israel—July 12, 2009 — Raz-Lee Security, a leading supplier of information security solutions, announced today that it has partnered with nuBridges Inc., the secure eBusiness authority. Under the terms of the agreement, Raz-Lee Security will sell [nuBridges Protect™](#), an award-winning encryption, tokenization and key management solution, to customers in Israel – the first encryption and tokenization solution to be sold in this country.

“With over 20 years of security focus and its strong IBM partnership, Raz-Lee has achieved an outstanding level of expertise and has become a leading security solution provider worldwide,” said Kim Addington, nuBridges Chief Marketing Officer. “We’re looking forward to working with Raz-Lee in Israel to help organizations achieve optimal data security and more easily comply with data security mandates and privacy laws.”

Designed for enterprises that need to protect payment card numbers as well as volumes of personally identifiable information (PII) from theft, nuBridges Protect reduces complexity and simplifies compliance management. It protects sensitive data at rest in database fields, files, applications and associated backup storage to help companies comply with mandates like the Payment Card Industry’s Data Security Standard (PCI DSS) and government privacy acts. Proven in production use for business-critical operations, nuBridges Protect is protecting millions of credit card numbers for some of the most prominent brands in the world.

nuBridges Protect is a multi-platform solution supporting Windows, Unix, IBM i and Mainframe, and offers full-lifecycle, PCI DSS-compliant encryption key management plus the latest in data security models, tokenization. One major advantage of using the tokenization module of nuBridges Protect is that it can remove applications and databases from the scope of PCI DSS audits, yielding significant cost, complexity and time savings.

nuBridges Protect's superiority was acknowledged by Info Security Products Guide, which proclaimed it the Winner of 2009 Global Excellence in Compliance Solution Award.

nuBridges Protect will complement Raz-Lee's iSecurity, which is a comprehensive, user-friendly security solution for iSeries (System i or AS/400) environments. iSecurity addresses insider threats, external security risks, and the need to monitor business-critical application data. iSecurity enables enterprises to comply with the requirements of the PCI, Sarbanes-Oxley, and HIPAA security regulations, as well as COBIT implementation guidelines. It includes over 15 individual products, securing companies' iSeries infrastructure, as well as their business-critical databases.

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
