

## Raz-Lee Security to Sponsor a Webcast and Host a Press Conference at COMMON 2010

Herzliya, Israel – April 15, 2010 - [Raz-Lee Security](#) will be involved in two exciting Power i events in the upcoming weeks – a Webcast and a Press Conference at [COMMON](#).

Raz-Lee, together with its US distributor, Software Engineering of America (SEA), is sponsoring a one-hour webcast by Mel Beckman, senior technical editor for System iNEWS. The topic of the webcast is "Managing Security in Multi-System and Multi-LPAR Environments", and it will take place on April 22, 2010 at 12:00PM EST. [Click here for more information.](#)

In addition, Shmuel Zailer, CEO of Raz-Lee Security, will hold a Press Conference entitled: "The Power i - Getting Younger Daily!" at the upcoming COMMON 2010 conference in Orlando, Florida. The press conference will focus on some of the fresh, modern features available for the Power i in Raz-Lee's products, which enhance the users' experience and streamlines their workflow. These features, include an ever-improving GUI interface, advanced business intelligence analysis of a network access and QAUDJRN data warehouse, extended SYSLOG support, time-saving wizards and soon to be announced support for SNMP and Twitter alerts.

"We do indeed believe the Power i is getting younger every day, while still preserving its status as a long-time favorite amongst its users," said Shmuel Zailer, CEO, Raz-Lee Security. "The Power i's user experience is ever changing and improving, thanks to companies like Raz-Lee, which continually investigates users' needs in and develops new tools to accommodate them."

### About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, with headquarters in Nanuet, New York, is a leading security solution provider for IBM's Power i (AS/400) computers. Drawing upon its 26 years of expertise in the Power i Performance and Optimization market, the company designs, develops, and markets a comprehensive suite of advanced security software solutions—iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
