

## **Raz-Lee Security Supplies Ashtrom Group with iSecurity, an Advanced Solution for Comprehensive Information Security**

**Herzliya, Israel – November 10, 2008** – Raz-Lee Security, a leading supplier of information security solutions for IBM's System i, supplied Ashtrom, one of the major engineering and construction groups in Israel, with iSecurity, an advanced solution for protection of Ashtrom's System i.

The Ashtrom Group decided to implement end-to-end System i security following the exposure of its servers to the network, and based on the importance they attach to the information on the System i. After a survey of the market, Ashtrom selected iSecurity due to its feature richness and ease of use.

Ashtrom uses iSecurity for monitoring user permissions within the organization, as well as for monitoring and blocking break-ins and external threats. iSecurity alerts the Ashtrom team on all changes in the company's business-critical information systems and in the access to their files, thus enabling the Ashtrom team to monitor problems and errors in user behavior and in the actions they performed.

iSecurity also enables users to easily create security and prevention rules using the activity event log and powerful wizards. In addition, the Ashtrom team uses iSecurity as a logging tool which organizes information on permissions, remote actions, file transfers and green-screen activities.

"The unique point about iSecurity is that despite all its powerful capabilities, it is also easy to launch and use, and doesn't hassle end users or the information security manager," said Yoni Tahan, System i Manager and System Analyst in Ashtrom. "In just a few days, we activated it and succeeded in producing reports showing the changes in our information systems – without interrupting existing systems."

"The Ashtrom Group handles diverse activities and projects," said Eli Spitz, VP Business Development, Raz-Lee Security. "We are proud that iSecurity not only achieves total protection of Ashtrom's large-scale information system, but also offers users convenient and effective control of such systems."

### **About the Ashtrom Group**

Ashtrom is the leading group in the field of engineering and construction in Israel. The group handles a wide diversity of building projects and related activities in Israel and worldwide. The group's activity, complemented by its subsidiaries, is spread across different sectors, and includes national infrastructure such as bridges, interchanges, roads, ports, trains, as well as residential and rental projects, construction factories, manpower supply services, and a wide diversity of activities around the world.

The group offers an array of services based on quality, effectiveness and professionalism, while meeting the highest international standards and giving an optimal response to customers, in accordance with the special needs of each project.

The Ashtrom Group continues to expand its activity in the local and international level and to offer creative, high-quality and advanced solutions for long-term customer satisfaction.

### **About Raz-Lee Security Inc. and iSecurity**

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
