

Banque LBLux Uses Raz-Lee's iSecurity for Advanced Server Monitoring Capabilities

Nanuet, New York - October 15, 2008 - Raz-Lee Security Inc., a major vendor of security solutions for IBM System i (iSeries or AS/400) servers, announced that Banque LBLux in Luxembourg, a subsidiary of BayernLB and Helaba, has selected iSecurity technology for System i server monitoring.

Banque LBLux uses the iSecurity Capture solution to record all screen activity of System i users who are permitted to have command line access: IT personnel, external consultants, etc. The captured session screens for both production and development systems are kept online for several months and then archived to tape for future retrieval and playback.

The key value of iSecurity Capture for the bank lies in the traceability of data, which is required by the IT Security of Banque LBLux.

"iSecurity helps us to easily meet and comply with corporate regulations," said Claude Lang, Head of Host Systems and Financial Services at Banque LBLux. "Using iSecurity Capture gives us a convenient and effective way of tracking the activity of any System i user both in real time as well as in the future, if required."

"Large international banks are one of our major market segments," said Eli Spitz, VP Business Development, Raz-Lee Security. "These financial institutions cannot afford to have any security issues and our iSecurity solutions provide them with the efficient and comprehensive monitoring they need."

About Banque LBLux

Banque LBLux is an internationally oriented Bank and has access to all currencies, services and investment products of the Euromarket as well as global financial markets. Corporate Banking in the Benelux countries and international Private Banking are the Bank's main spheres of activity. These business areas are supplemented and supported by the bank's Trading/Treasury department. To leverage synergies, the Bank is also an IT service provider for several European key locations of the BayernLB Group.

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
