

Raz-Lee Security Protects Dubek's Information Systems Using iSecurity

Herzliya, Israel – 3 February 2009 – Raz-Lee Security, a leading supplier of information security solutions for IBM's System i environment, provided Dubek, the single large cigarette manufacturer in Israel, with iSecurity, its advanced security solution for System i servers.

Recent studies by the FBI and other third-party organizations have shown that it is vital to protect servers not only from external unauthorized access, but even more so from insider threat. Dubek required a tool which supports central monitoring of internal access authorities, eliminating the need to deal with permissions for each and every application used by the organization.

iSecurity provides Dubek with an end-to-end solution for effective control of permissions. The system's flexibility enables the user to set permissions based on exit programs, objects, user profiles, workstations and computer programs. It also saves time and errors through a useful Grouping feature, which enables assigning a user, an object, a terminal or a program to a pre-defined group. And, iSecurity enables easy, convenient monitoring of server access attempts – a major factor in securing Dubek's sensitive business-critical information and meeting auditor requirements.

"iSecurity is user-friendly, and gives a full solution for internal security in the System i environment," said Michael Water, Information Systems Manager, Dubek. "After a short explanation on the software's usability and the logic on which it is based, I began to use it myself, and deployed it in the company with no need for additional assistance."

"An important element in protection from insider threat is the convenience and flexibility of the solution," said Eli Spitz, VP Business Development, Raz-Lee Security. "iSecurity is installed at hundreds of companies in Israel, in some of the largest financial, insurance, healthcare and industrial companies on the market, as well as in 30 countries worldwide – and each one of our customers has used iSecurity to create a totally different security system adapted to their specific needs."

About Dubek

Dubek is the single large cigarette manufacturer in Israel, manufacturing, marketing and distributing various cigarette, cigar, lighter and smoking accessory brands in Israel, the Palestinian Authority, Gaza Strip and the West Bank. With the assistance of the largest and most professional distribution networks in Israel, Dubek has achieved approximately 10,000 points of sale.

The Company's brands enjoy an international reputation of excellence and have won many gold medals for quality. Dubek employs maximal efforts to provide its clients a large variety of high-quality products, while maintaining constant innovation and offering a solution to the entire Israeli population.

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
