FOR IMMEDIATE RELEASE

Dun & Bradstreet (Singapore) Selects Raz-Lee's iSecurity for Protection of their System i Environment

iSecurity diagnosed and prevented a number of attempts to infiltrate D&B's systems

Nanuet, New York (May 28, 2008) - Raz-Lee Security Inc., a major vendor of security solutions for IBM System i computers, has provided Dun & Bradstreet (Singapore), a leading provider of commercial information and insight on businesses, with iSecurity, an advanced comprehensive solution for protecting System i environments.

Dun & Bradstreet chose to purchase the iSecurity Prevention and Compliance packs. The Prevention pack provides complete protection, including user and password management, anti-virus protection, investigation of suspicious events, protection of unattended workstations and comprehensive review of server security status. The Compliance Pack includes powerful and flexible auditing and reporting solutions for all types of security-related information, enforcing compliance and security policy implementation.

iSecurity replaced a competing security solution which D&B had previously used, but felt was restrictive and ineffective. D&B conducted in-depth research before choosing iSecurity, so that they were well-familiar with the product. They easily implemented it to their full satisfaction, using it to protect their System i environment and receive specific security information according to their needs. Using iSecurity, D&B has already diagnosed and prevented a number of hacking attempts, thereby assuring the safety of D&B's systems and information.

"iSecurity provides complete functionality and lets you get the full picture," said Tim Birch, General Manager, IT at Dun & Bradstreet Singapore. "The system was easily implemented, and since it was straightforward and intuitive, people picked it up quickly. Security should be easy - not difficult."

"iSecurity is perfectly-suited for protecting complex information systems like those at Dun &Bradstreet (Singapore)," said Eli Spitz, VP Business Development, Raz-Lee Security. "It is also a pleasure for us to work with a customer who uses the powerful capabilities of iSecurity to full advantage, from blocking hacking attempts to producing various types and formats of security reports."

About Dun & BradStreet (Singapore)

Dun & Bradstreet (Singapore) Pte Ltd is Singapore's leading source of business information and insight, enabling companies to Decide with Confidence.

D&B Singapore is a joint venture between Infocredit Holdings Pte Ltd and Dun & Bradstreet (NYSE:D&B). Through Infocredit Holdings' partnership with Veda Advantage Ltd, further technological enhancement and industry expertise is harnessed.

As a premier provider of credit, bureau, marketing, purchasing, and receivables management services, D&B helps its customers mitigate risk, increase revenue, identify savings and as a result drive growth and profitability.

D&B Singapore is also part of the D&B Worldwide Network comprising more than 200 markets globally, which enhances the breadth and depth of our global data coverage. We have access to the biggest and best quality commercial business information database enhanced by D&B's proprietary DUNSRight Quality Process, which transforms the enormous amount of data collected daily into decision-ready insight.

About Raz-Lee Security Inc.

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
