

News Release

For Immediate Release

Filescope Version 14 declared GA!

Nanuet, New York (October 17, 2006) Raz-Lee Security, a world-renowned developer of System i security and productivity products, has announced the availability of a new release of **FileScope**.

FileScope assists development teams with all aspects of data base manipulation and editing, and has been enhanced over the years which numerous unique features making it a “must” in all System i shops. Indeed, many thousands of licenses of **FileScope** are in active daily use worldwide.

Version 14 of the product adds a series of functional expansions and upgrades to **FileScope** detailed below.

Mr. Shmuel Zailer, CEO and CTO of Raz-Lee Security Inc. said: “We at Raz-Lee Security continuously upgrade our products in order to provide our clients with the best products possible. We chose to upgrade these features based on customer feedback to which we are attentive at all times. We take pride in the fact that we are the world leader in developing a tool that users think of as part of “vanilla” OS/400!”

Upgraded features:

1. **Full Unicode support- FileScope** now supports Unicode type USC-2. Whereas previously users were limited in the language they could use, with V14 any user can use any language and view all data on the screen. Information regarding Unicode can be obtained by clicking on: <http://www.freetds.org/userguide/aboutunicode.htm> .
2. **Show Journal (SHWJC)- FileScope** converts data residing in the database in a flat file format, back into its original format, enabling the user to retrieve and use data in a more user-friendly manner.
3. **Change DTARAA (CHGDAC)-** Enables the user to simultaneously change data in various fields.
4. **Show DTAQ (SHWDQC)-** Allows the user to view Data Queues in either standard data queue format or, if the data is divided into fields, based on a template file.
5. **Change DTAQ (CHGDQC)-** Allows the user to edit Data Queues in either standard data queue format or, if the data is divided into fields, based on a template file.
6. **SOX compliance** – The product fully compiles with SOX requirements.
7. **Report generating** – Limitations on the size of the **outfiles** and **csv files** and the number of entries, have all been removed.

8. **NSTART** - Reverse function to **START**. Whereas the **START** command displays all items starting with the requested character (for example, **START %B%** means display all items that begin with the letter B), **NSTART %B%** means display all items that **don't** contain the letter B.
9. **LIKE** - Display all items containing a certain letter or sting of letters; **LIKE B** displays all items containing the letter B.
10. **NLIKE** Displays all items that don't have a certain letter; **NLIKE B** displays all items that **don't** contain the letter B.

About Raz – Lee Security Inc.

Raz-Lee Security Inc. (www.razlee.com) is the developer of iSecurity™, the leading security solution for the IBM System i (AS/400). Founded in 1983, Raz-Lee Security Inc. has leveraged its years of experience to design, develop and market comprehensive security solutions, exclusively customized to assure maximum system protection. With iSecurity™, Raz-Lee sets the new System i security standard in the market.
