To Whom it May Concern

The Israel Act Pool has been using Raz-Lee Security's FileScope, Firewall, Audit and Action modules of iSecurity since it was established in January 1, 2002.

FileScope has greatly assisted us in easing and streamlining our work with DB2; indeed, all of the work on the files is being done by using FileScope. The product enables us to do all manipulations on the files instead of programming, that saves us much time and effort.

We are using the iSecurity modules in a number of ways. First of all, Firewall addresses our requirements for a flexible, easily configurable network access product which addresses all security-related exit points in our computer. The Audit and Action modules work together to catch potential security exposures in real-time and to automate responses to these exposures by sending SMS messages and e-mails to relevant personnel at our shop.

We appreciate the efforts of Raz-Lee Security's support staff which in most cases is able to solve any issues which arise from time to time in an expeditious and professional manner.

In summation, we heartily recommend the FileScope and iSecurity products to other companies.
