

## **iSecurity AP-Journal Enhanced with Full GUI Support**

**Herzliya, Israel** – July 18, 2010 - [Raz-Lee Security](#), a leading supplier of information security solutions for IBM Power i servers (iSeries/AS/400), has enhanced iSecurity AP-Journal with an Eclipse-based GUI environment. This makes Application Security easier than ever to implement and use.

AP-Journal keeps managers closely informed of all changes in their valuable information assets and streamlines IBM i journaling procedures. AP-Journal's standard features include:

- Addressing PCI, SOX, HIPAA, etc. requirements for closely monitoring and raising alerts when application data changes
- Long-term storage of sensitive business information, independent of journal receiver lifecycle to adhere to storage limits
- Output as e-mailed CSV, HTML, PDF attachments, Outfile, Print or within GUI
- READ operations selectively added to OS/400 Journal Receivers, complying with PCI requirements for accessing sensitive data
- Timeline & cross-application reports based upon user-defined business items
- Real time Syslog, SNMP and Twitter alerts, in addition to alerts sent as e-mails, SMS messages, operator messages, etc.
- "Mass" uploading of data base update information directly to SIEM systems via Syslog without I/O overhead of writing to disk

The new GUI support in AP-Journal includes:

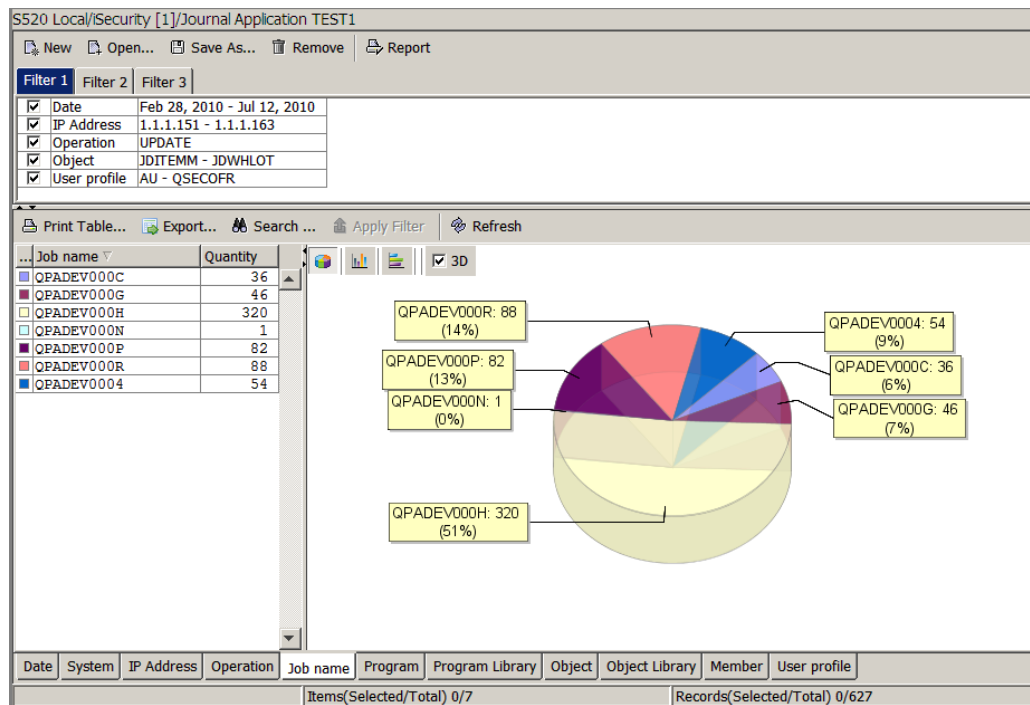

- Defining applications, including:
  - Journalized files
  - Business items which are common fields appearing in multiple files
  - Filtering rules for long term retention of selected data fields
  - Defining alerts based upon pre-determined field-level thresholds and activities
- Reporting on application changes, including "before" and "after" data images based on:
  - OS/400 journal receivers
  - Special purpose journal containers which contain long term, application-specific information
- Using the unique business intelligence interface, Visualizer, to:
  - View summary data based on any application or journal header field
  - Isolate the desired population instantaneously
  - Accessing the detailed data corresponding to the desired population

"Our AP-Journal product has proved to be an ongoing success, and has been selling successfully worldwide for several years," said Eli Spitz, VP Business Development, Raz-Lee Security. "In fact, AP-Journal's success was instrumental in bringing about the recent press focus on IBM i Application Security, in addition to "traditional" infrastructure security aspects like network access, QAUDJRN monitoring and reporting, and user profile auditing".

Cont.

AP-Journal had a significant impact at Toyota Boshoku America which attained JSOX compliance by providing reports on changes in application files. Another especially interesting implementation of AP-Journal was at Promedico which included

- Preventing undue blockage of customer orders on account of credit limitations
- Checking the validity of updates to pharmaceutical product's expiration dates
- Accelerating the supply process

The 'TEST1 Details' window provides specific information for a job. Below the job details is a table comparing field values before and after an update.

Field name	Field text	Before	After
DORDNO	ORDER NUMBER	007769	007769
DLINNO	LINE NUMBER	1.	1.
DITMCD	ITEM CODE	0000176953	0000176953
DQUANT	QUANTITY	975.00	947.00
DPRICE	PRICE	10.65	10.40
DDDATE	DELIVERY DATE	100321.	100321.
DMDDAT	MIDAS DATE	0.	0.

### About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, with headquarters in Nanuet, New York, is a leading security solution provider for IBM's Power i (AS/400) computers. Drawing upon its 26 years of expertise in the Power i Performance and Optimization market, the company designs, develops, and markets a comprehensive suite of advanced security software solutions—iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete

security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
