

New iSecurity Release Includes Red-Hot Features: Unicode, Twitter, Syslog, SNMP, Smart Wizards & more

Herzliya, Israel – July 5, 2010 - [Raz-Lee Security](#), a leading supplier of information security & compliance solutions for the IBM Power i, announced a new release of iSecurity and Scope products. This major release of [iSecurity](#) and [Scope](#) products is especially significant as it harnesses Raz-Lee's unique technological capabilities to cover market needs and customer requests. In addition, all Raz-Lee products support IBM's new release, 7.1.

In particular, Raz-Lee's unique support in FileScope and CodeScope for Unicode will enable companies to easily support multi-language applications and universal source code.

The new and powerful features added to the iSecurity products in this release include:

- [GUI](#) – including support for AP-Journal, GUI Help integration, table export to PDF, HTML, CSV, Excel, ODS and more.
- [Firewall](#) – including inheriting in-product IFS authorities from a higher directory or file , streamlined rules support for multiple libraries, web application server performance improvements, SQL long names, using “model libraries” for defining security rules and more.
- [AP-Journal](#) – Significant Syslog performance enhancements when sending all file updates to Syslog SIEM viewer.
- [Audit](#) - New Raz-Lee audit types (\$Q, \$U, \$V, \$W) for monitoring and reporting, audit type C@ now includes descriptive subtypes and more.
- [Action](#) (including all products using Action: Firewall, Audit, AOD, AP-Journal, Anti-Virus) – Authenticated e-mail, support for SNMP & Twitter added to existing Syslog support, standalone SNMP and Twitter commands.
- [Screen](#) - supports SIGNOFF with or without ending the connection.
- [Native Object Security](#) – Smart wizard analyzes current security-related object definitions in library and pinpoints security-level exceptions.
- [Replication](#) - Supports Program Exceptions for Replication.
- [FileScope](#) - Supports Unicode in all product functionality, activity tracing as in Action above, authenticated e-mail.
- [CodeScope](#) – Supports Unicode.

"We are proud to announce this feature-rich new release," said Shmuel Zailer, Raz-Lee Security. "With hot new features such as Unicode, Twitter, Syslog, SNMP and Smart Wizards, we are well-equipped to meet the current and future needs of our customers."

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its more than 25 years of expertise in the Power i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
