Raz-Lee Security and Innovatum Cross The Divide Between System Security And Database Auditing

Imagine detecting inappropriate system access, but not knowing the true impact on critical data. With the newly announced integration between iSecurity and DataThread, this is no longer a challenge

Nanuet, New York – October 3, 2006 — Innovatum, Inc. with their compliance powerhouse tool DataThread, has extended its reach into security through tight integration with iSecurity, the most comprehensive security product in the System i market, developed and marketed by fellow IBM Advanced Level Business Partner, Raz Lee Security. This new capability allows System i installations to have a unified view of security and database activity and to proactively and immediately react to preconfigured watch points and events

Details about the combined tool set will be discussed during a webcast sponsored by Innovatum on Thursday, October 5th at 11:00 a.m. EDT (16:00 London, 17:00 Paris). Register at www.innovatum.com.

During the one-hour webcast, participants will see:

- An overview of the combined tool set.
- Wizards for automated analysis of current security related activity.
- Wizards to selectively apply new security rules based on the analysis.
- How to implement in an easy, risk free, 1,2,3 step process.

“Everyone knows the System i is the platform of choice when it comes to compliance, especially with its distinguished history in the area of security. Today’s networked environments and ever increasing regulations though have put new demands on IT, and the logical response is automation.” said Ardi Batmanghelidj, President of Innovatum. “Our rigorous search for ISV’s with complimentary tools showed iSecurity to have the best design, performance, and degree of automation. We are excited to bring these new capabilities to the

iSociety IT professional as they look for innovative ways to defend, control and assure their environments in a cost effective manner” said Batmanghelidj.

“This integration brings, what we believe to be, the best available technology for assuring compliance in a System i environment. DataThread is the proven data audit tool and we are thrilled to integrate iSecurity with it! This completes the puzzle of assurance for System i computing environments.” said Shmuel Zailer, CTO, RazLee Security. “

Featured speakers during the Oct. 5th webcast include; Ardi Batmanghelidj, President, Innovatum; and Shmuel Zailer, CTO, RazLee Security. Register today at www.innovatum.com.

About Innovatum Inc.

Innovatum is a software development and IT consulting firm that developed DataThread, a universal compliance tool for the System i and iSeries. The company delivers world-class professional services and enterprise software products to companies in heavily regulated industries.
