

## **Raz-Lee Security Enhances & Expands iSecurity GUI**

**Nanuet, New York (April 22, 2009)** - Raz-Lee Security Inc., a major vendor of security solutions for IBM Power i computers, has announced a major new GUI release, with features that enrich and ease the user's iSecurity experience. Some of the highlights of this new release are:

- Preliminary access filter for data retrieval, reducing network load and reducing response time
- Drill-down capability from the Visualizer business-intelligence tool to the Firewall or Audit log, enabling specific event analysis down to the log-entry level
- Role-based navigation tree providing Auditors with only the tree items they require
- Standard reports are opened directly as GUI tables, with advanced Eclipse features for table management including exporting directly to spreadsheet
- Reports stored in IFS as PC format files are opened directly in CSV, PDF, HTML formats
- SYSLOG supported in Audit and Action menus
- GUI support for Audit, Action and Capture has been vastly expanded

The iSecurity GUI is based on Eclipse, enabling it to conform to worldwide GUI standards. Eclipse is known to be highly efficient in Windows, and offers a Windows look and feel. Besides being supported by major companies worldwide (such as Adobe), Eclipse is strongly supported by IBM, which has invested significant funding in Eclipse-based platforms.

"With this new release, we have vastly improved the iSecurity GUI and elevated it to a new level of professionalism," said Ilan Marnin, Head of GUI Department, Raz-Lee Security. "The user can now get very specific security-related information, and view or analyze this information with little or no effort."

### **About Raz-Lee Security Inc. and iSecurity**

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's Power i (AS/400) computers. Drawing upon its 26 years of expertise in the Power i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
