

## **IBM Italy Grants VAE (Value Added Enhancement) Status to Raz-Lee's iSecurity Product Suite**

**Herzliya, Israel – March 18, 2009** – IBM Italy has declared Raz-Lee's iSecurity product suite a “VAE (Value Added Enhancement) Approved Solution”, to be sold in a bundle with the new IBM PowerSystem “i” servers. This decision reflects IBM Italy's strategy of selling a total solution based on the new Power System, and also demonstrates the strong cooperation between IBM and Raz-Lee Security.

iSecurity's VAE status was approved by IBM Italy's PowerSystem “i” Marketing Department, including Audrey Hampshire, PowerSystems Channel Marketing Manager, Luca Giuratrabocchetta, P/Systems & Technology Group, Business Development Manager, and Alessandro La Volpe, PowerSystems Brand Manager.

Furthermore, Raz-Lee has integrated its iSecurity product series with IBM's ACG basic module, the ACG Service Bus, which is IBM's leading ERP solution installed on over 10,000 AS/400 systems. As a result of this integration, ACG is a unique ERP system providing maximum data security and compliance with security regulations.

"We are proud to further strengthen our relationship with IBM with the new VAE status for iSecurity," said Shmuel Zailer, CEO, Raz-Lee Security. "Moreover, I am confident that this one-stop-shop approach will increase customer satisfaction with both IBM PowerSystem "i" and iSecurity".

### **About Raz-Lee Security Inc. and iSecurity**

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 26 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
