

New Native Object Security Management Module Joins Raz-Lee's iSecurity Suite

Herzliya, Israel – November 10, 2009 - Raz-Lee Security, a leading supplier of information security solutions for the IBM Power i, has enhanced its iSecurity product suite with a new Native Object Security management module.

Defining security rights for native objects is the basis for all Power i security. However, these activities are work-intensive and therefore very susceptible to errors and oversights.

iSecurity's Native Object Security capabilities enable system administrators to easily define target security levels per object and object type, and to check for inconsistencies between actual and planned object security settings. They also enable using generic object names, and include full reporting features.

Native Object Security capabilities include:

- Setting up multiple object security rules simultaneously, using generic naming capabilities
- Checking target (planned) settings with the current object security status, and showing inconsistencies
- Setting the current security status to the planned status
- Defining Object Owner, Authorization List, Primary Group, and specific user authorities (Add/Replace)
- Setting Audit value and Reset usage count
- Full reporting capabilities including OUTFILE

"We strive to maximize the user's flexibility and variety of options," said Eli Spitz, VP Business Development, Raz-Lee Security. "Accordingly, iSecurity supports both general and specific security settings, be it individual security levels for each and every object, or special temporary authorities for emergency cases. This allows the security settings to reflect the customer's exact needs, with little or no constraints".

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its more than 25 years of expertise in the Power i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite,

which provides information on all changes in business-critical data using real-time alerts and timeline reports.
