To Whom it May Concern

Leumit Health Fund has been using Raz-Lee Security's FileScope product since January 1, 2002 and the Firewall and Audit modules of iSecurity since January 1, 2005.

FileScope has over the years assisted our developers greatly, easing and streamlining their work, and ensuring that the production data is "clean" and correct. The product enables us to catch and correct problems caused by inaccurate or missing data at the earliest stages possible, saving much time and effort during our production runs.

It was decided to implement the iSecurity modules in order to hermetically close off all security-related exposure in our iSeries systems. Besides offering us maximum protection and flexibility, the products also provide us the opportunity to easily generate ready-made as well as "on the fly" reports, which are used by our systems managers and auditors to assure full compliance with government regulations.

We appreciate the efforts of Raz-Lee Security's support staff which in most cases is able to solve any issues which arise from time to time in an expeditious and professional manner.

In summation, we heartily recommend the FileScope and iSecurity products to other companies.
