

Meuhedet, a Major Israeli Health Fund, Selects Raz-Lee's iSecurity for Protection of its System i Environment

Herzliya, Israel – May 7, 2009 – Raz-Lee Security, a leading supplier of information security solutions for IBM's System i, announced that Meuhedet Health Fund selected Raz-Lee's information security system for protecting its System i (iSeries or AS/400).

Meuhedet's iSecurity implementation includes Firewall, a solution supplying complete protection from infiltrations and unauthorized access, covering all relevant protocols. It also includes an IDS (Intrusion Detection System generating real time alerts) and Screen, a solution for protection of unattended workstations.

At Meuhedet, iSecurity is used for monitoring internal and external access to the server, blocking unauthorized users and checking problems with the entry attempts of users who have proper permissions. iSecurity enables monitoring the entries into the system and watching the data on each entry using a user-friendly log.

"iSecurity gets the job done," said Itsik Rejiniano, a System Programmer at Meuhedet Health Fund. "It provides total protection for the server, but on the other hand, offers the user easy and effective management capabilities."

"Large entities in the health sector tend to choose iSecurity since it is designed for sizeable organizations characterized by numerous users, handling personal, classified information," said Eli Spitz, VP Business Development, Raz-Lee Security. "Such an organization demands a quality security solution with a high level of performance, which also provides a convenient GUI enabling easy management of numerous users."

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
