

## **Neviot, Leading Mineral Water Company, Uses Raz-Lee's iSecurity for Solid Protection of its Information Systems**

**Herzliya, Israel** – 22 September, 2008 – Raz-Lee Security, a leading supplier of information security solutions for IBM System i computers, announced that its iSecurity product suite is used to protect the System i servers of Neviot Teva Hagalil, one of the leading companies in Israel in the field of mineral water.

Neviot uses iSecurity Firewall to protect its information systems from external break-ins, and to perform internal monitoring of user activity. According to recent research, most illegal actions relating to corporate information systems, and the resulting heavy damages to the company, are caused from within the organization. iSecurity Firewall protects all types of access to System i computers and protects all protocol types (TCP/IP, FTP, Telnet and more).

iSecurity operates independently and requires very little maintenance from the Neviot team. "I haven't seen another product which combines such powerful capabilities and remarkable ease of management," said Amiel Mizrahi, Network Manager at Neviot. "With iSecurity, you can simply forget about the system and it does the job on its own. We haven't encountered a single bug – the system has exceptional reliability, and if I need to approach Raz-Lee, I always enjoy their quick and efficient service."

"iSecurity provides a comprehensive solution for preventing infiltration of Neviot's information systems," said Eli Spitz, VP Business Development, Raz-Lee Security. "Raz-Lee's unique technology, based upon multiple security layers, examines each access request via a number of virtual gateways, and creates a non-intrusive security wall, releasing security managers from the need to formulate long and complex security rules."

### **About Raz-Lee Security Inc. and iSecurity**

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 25 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.

## **About Neviot Teva Ha'Galil**

Neviot was established in 1989, after a team of experts from the Israeli Geological Institute found and examined Ein Zahav spring, establishing it as a select source of natural mineral water. Ein Zahav is the largest mineral water spring in Israel, which excels with a high stream rate and unique, permanent mineral compound.

Neviot Teva Ha'Galil is a public company, traded in the Tel Aviv Stock Exchange and owned by the Central Company for Production of Light Drinks (CBC) from 2000. During this year, the Central Company purchased 43% of Neviot, and in 2004 it completed the acquisition by purchasing the remainder of private stocks (altogether 86%).
