

## **FOR IMMEDIATE RELEASE**

# **Raz-Lee Security announces significant new Auditing, Reporting and Compliance capabilities in iSecurity**

Nanuet, New York (August 29, 2007) Raz-Lee Security Inc., a leading vendor of security solutions for the IBM System i, has announced significant enhancements of iSecurity, the most comprehensive security suite of products on the market for System i security and compliance solutions.

This product enhancement includes major new Auditing, Reporting and Compliance capabilities, some of which are detailed below:

- Full compliance capabilities including nearly 300 built-in compliance-ready reports are supplied covering all aspects of object authority, user management, system values, network attributes and audit types. These reports can be used to quickly assess a company's status in regards to SOX/HIPAA/ISO 17799/PCI compliance regulations.
- Comprehensive support is provided for viewing system values and network attribute's current site settings, baseline settings and IBM's recommended values in a single report which clearly value changes. Support is provided for sites to set baselines at any time.
- New Auditing, Reporting and Compliance capabilities provide "one-stop" solutions to auditor's and System Administrator's requests for reporting in multi-server environments. Reports can be executed and viewed or printed either on remote systems or locally, and can easily be set up for execution on pre-defined groups of servers as well.
- The built-in Auditing and Compliance reports are packaged together with explanations detailing the importance of the particular report for auditors. In addition, for individual reports we have provided references to specific paragraphs and sections in the various compliance regulation documents.
- Companies can easily tailor the built-in reports to specific site requirements and naming conventions, can define new reports and can schedule execution of individual or groups of reports as necessary.
- Java-based GUI functionality allows users to define, submit and view reports from individual workstations. Back-dated reports which were saved can be viewed at any time.
- All reports can be produced in multiple formats including HTML, PDF and Excel and can be sent directly to any number of e-mail recipients or printers. The product includes an embedded Excel-like spreadsheet for viewing, analyzing and graphing reports run on the System i.

Mr. Shmuel Zailer, CEO of Raz-Lee Security said: “The newly released Auditing, Reporting and Compliance capabilities of iSecurity includes features requested by auditors, customers and prospects in a number of key areas.

iSecurity now has more capabilities and addresses more security and compliance-related areas in and around the System i, such as user, screen, system, data base and system audit journal management to name just a few, than any other product on the market.

Together with our distributors worldwide, we look forward to providing our current customer base as well as our future customers with the best in System i security.”

### **About Raz-Lee Security Inc.**

With corporate headquarters in Nanuet, New York, Raz-Lee Security is the leading security solution provider for the IBM System i (AS/400). Drawing upon over 24 years of standard and mission-critical installation experience, Raz-Lee has leveraged vast expertise in the System i Performance and Optimization Market to design, develop and market comprehensive security solutions.

The broad scope of this experience gives Raz-Lee the insight required to develop, deploy and maintain products and solutions to assure end-to-end security for every System i configuration and application.
