

Raz-Lee Security teams with RSA to Provide Seamless Integration with the RSA enVision® platform

Interoperability enables joint customers to integrate IBM i-based security alerts into the RSA enVision® platform

Nanuet, New York – April 2, 2011 - Raz-Lee Security announced that it has joined the RSA Secured® Partner Program to certify interoperability between Raz-Lee's iSecurity for IBM i product suite and RSA enVision® platform from RSA, The Security Division of EMC (NYSE: EMC). This certification signifies that a technical partnership has been established to help increase security and compliance for joint customers through best-of-breed integration.

Mr. Shmuel Zailer, CEO of Raz-Lee Security said: "RSA certification of our iSecurity for IBM i product suite will enable us to provide our customers, worldwide, with an extremely easy-to-use, native interface to one of the leading SIEM products on the market, the RSA enVision platform. Real-time security related alerts from both the IBM i infrastructure as well as business-critical applications, will be sent to the RSA enVision platform as Syslog or SNMP messages and integrated with security alerts from other platforms in the enterprise, allowing the company's Security Officer a "total picture" of all related activity, company-wide."

iSecurity helps companies protect valuable information assets against insider threats, unauthorized external access and malicious, or inadvertent, changes to field-level data in business-critical applications. Real-time alerts from all modules are sent as Syslog, SNMP, SMS, e-mail, MSGQ, Twitter, etc. messages to specified recipients.

iSecurity helps enable companies to comply with PCI, SOX (Sarbanes-Oxley), HIPAA and industry or auditor-specified requirements. Raz-Lee's wide-ranging customer base includes large companies in all vertical markets, in more than 35 countries worldwide.

The RSA enVision platform is a scalable, high availability solution for SIEM. It provides automated collection, analysis, alerting, auditing, reporting and secure storage of all logs. The RSA enVision platform enables organizations to simplify compliance, enhance their security and risk mitigation and optimize IT and network operations.

About the RSA Secured Partner Program

The RSA Secured Partner Program is one of the largest and longest-running technology alliance programs of its type, bringing more than 1,000 complementary solutions across more than 300 organizations together. RSA SecurID®, RSA® Access Manager, RSA® Adaptive Authentication, RSA® Digital Certificate Solutions, RSA® Hybrid Authenticators, RSA enVision®, RSA® Federated Identity Manager and RSA® Key Manager Suite certification programs bring added assurance to customers that their solutions are certified as interoperable to help them achieve faster time to deployment and lower overall cost of ownership. The RSA Secured Partner Program reflects RSA's commitment to driving inventive collaboration across the industry and support standards-based interoperability with its information-centric security solutions to help protect information, identities and infrastructures.
