

Raz-Lee Security to Display New Compliance Evaluator Solution at Common 2009

Shmuel Zailer, Raz-Lee CEO, to Give Presentation on DB-Journal Tracking

Herzliya, Israel – March 30, 2009 - Raz-Lee Security will demonstrate its advanced Power i security solutions at [Common 2009](#), Booth 602, on April 26-28 at the Grand Sierra Resort and Casino in Reno, Nevada.

Raz-Lee products on display at Common will include three of its most advanced security offerings:

- **Compliance Evaluator** - enables managers a quick, comprehensive view of their system's compliance with industry and corporate policies and provides reports with various levels of detail.
- **Authority on Demand** - provides an advanced solution for emergency access to critical application data and processes.
- **AP-Journal** - protects business-critical information from insider threats and from external security breaches. It issues real-time alerts on changes to data, records read, and open actions, and provides timeline reports on all changes over long periods of time.

In addition, Shmuel Zailer, Raz-Lee Security's CEO, will give a presentation on "*Tracking Application Activity via the DB-Journal; the Missing Dimension of Information Systems*" at 8 a.m. Monday, April 27. For more information on this visit the following link:

"We look forward to this opportunity to present our advanced new tools and leadership," said Zailer. "Our Compliance Evaluator will be debuting at the conference, and, as a much-needed manager's compliance tool, we are confident that it will generate much attention and interest."

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, with headquarters in Nanuet, New York, is a leading security solution provider for IBM's Power i (AS/400) computers. Drawing upon its 26 years of expertise in the Power i Performance and Optimization market, the company designs, develops, and markets a comprehensive suite of advanced security software solutions—iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
