

## **Raz-Lee Achieves Both IBM Advanced Business Partner & IBM Power Systems Software Status**

**Herzliya, Israel – July 27, 2009** – Raz-Lee Security has received IBM Power Systems Software Status, and has also reaffirmed its IBM Advanced Business Partner Status. These emblems reflect the close relationship between Raz-Lee and IBM.

According to [IBM](#), "**Advanced level Business Partners** have committed to maintaining a prosperous business relationship with IBM and are recognized and rewarded for that commitment". This status is awarded when a business partner displays qualified skills, revenue achievements, or demonstrated that their IBM-based solutions have been successfully implemented at a customer site through a customer experience. IBM provides Advanced Business Partners with an enhanced level of benefits to in marketing, sales support, technical enablement and skill development.

**Ready for IBM Power Systems Software** validation enables business partners to demonstrate and validate the integration between their solutions and the IBM Power Systems Software portfolio.

"We are proud to elevate our relationship with IBM to a new and higher level," said Shmuel Zailer, CEO, Raz-Lee Security. "After the many years of our working together with IBM and implementing advanced security technology all over the world, we have been rewarded with the new status. I'm confident that the additional advantages and support we receive from IBM will help accelerate the distribution of our solutions worldwide".

### **About Raz-Lee Security Inc. and iSecurity**

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its 26 years of expertise in the System i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
