

News Release

For Immediate Release

Raz-Lee announces that iSecurity GUI to be deployed as an Eclipse plug in and RCP.

Nanuet, New York (September 10, 2006) Raz-Lee Security Inc., a leading provider of security solutions for the IBM System i, announced today that all further deployment of GUI-based products will be done using the Eclipse environment.

Mr. Shmuel Zailer, CEO and CTO of Raz-Lee Security Inc. said: "We at Raz-Lee strive to upgrade all our products using the best desktop application environment possible. After considering the different alternatives that are currently available on the market, Raz-Lee Security has decided to use Eclipse due to its robust and flexible capabilities. We also have learned that numerous corporate organizations are using Eclipse environment as well. Based upon our customer's demands, we have determined that developing our GUI software using Eclipse opens numerous possibilities for enhancing the user experience with iSecurity. In particular, the built-in "tab" feature of Eclipse will enable our users to examine two or more systems simultaneously."

About Eclipse

Eclipse is an open source community whose projects are focused on providing a vendor-neutral open development platform and application framework for building software. The Eclipse Foundation is a non-profit corporation formed to advance the creation, evolution, promotion, and support of the Eclipse Platform and to cultivate both an open source community and an ecosystem of complementary products, capabilities, and services.

Eclipse has formed an independent open eco-system around royalty-free technology and a universal platform for tools integration. Eclipse-based tools give developers freedom of choice in a multi-language, multi-platform, multi-vendor environment. Eclipse provides a plug-in based framework that makes it easier to create, integrate and utilize software tools, saving time and money. By collaborating and exploiting core integration technology, tool producers can leverage platform reuse and concentrate on core competencies to create new development technology.

The Eclipse Platform is written in the Java language and comes with extensive plug-in construction toolkits and examples. It has already been deployed on a range of development workstations including Linux, HP-UX, AIX, Solaris, QNX, Mac OS X and Windows based systems. A full description of the Eclipse community and white

more

papers documenting the design and use of the Eclipse Platform are available at <http://www.eclipse.org>.

You can learn more about the structure and mission of the Eclipse Foundation by reading the formal documents that establish how the foundation operates, and by reading the press release announcing the creation of the independent organization.

About Raz – Lee Inc.

Raz-Lee Security Inc. (www.razlee.com) is the developer of iSecurity™ solution, the leading security solution for the IBM System i (AS/400). Founded in 1983, Raz-Lee Security Inc. has leveraged its years of experience to design, develop and market comprehensive security solutions, exclusively customized to assure maximum system protection. With iSecurity™ Raz-Lee sets the new System i security standard in the market.

iSecurity™ provides users with all SOX (Sarbanes Oxley), HIPAA, Bazel and other leading market standards, requirements and demands. Raz-Lee Security provides a leadership role in the evolution of System i security solutions, from innovative technology to cutting edge solutions. iSecurity™ protects your organization's entire data and assures successful business continuity.

Raz-Lee continues its commitment and dedication to providing today's cutting edge security solutions and technology for the System i environment. Raz-Lee is constantly striving to bring innovative System i security solutions to the market.
