

New User Profile & System Value Replication Module Joins Raz-Lee's iSecurity Suite

Herzliya, Israel - November 10, 2009 - Raz-Lee Security, a leading supplier of information security solutions for the IBM Power i, has enhanced the iSecurity product suite with advanced User Profile & System Value Replication modules, including the ability to restore previously deleted user profile definitions.

The recent trend of consolidating servers has led to the increasing prevalence of multi-system and multi-LPAR shops. Companies have found it mandatory that system administrators and users alike synchronize user profile definitions, user passwords and system values between the different systems, allowing for exceptions as needed in Production, Test or Development systems. Such synchronization should be accomplished with minimum overhead to both the actual systems and the personnel mandated with managing user profile information.

As a result of the growing demand for data synchronization, Raz-Lee has added the following capabilities to iSecurity, its flagship Power i Security system:

- Flexible user-defined replication rules defining user profiles, passwords and parameters to be replicated
- Definition of destination system(s) for replication
- Bulk updates of user profiles
- Setting of System Values to optimal value or site-defined baseline values
- Replication of all, group or individual system values
- Collection & display of network-wide replication results
- Revival of deleted users, with an option to modify parameters
- Can be initiated from any system in the environment and does not require special commands

"We are excited to be able to offer our customers these important capabilities, which help streamline corporate IT tasks," said Shmuel Zailer, CEO, Raz-Lee Security. "As top experts in the field of Power i security, it is our mission to continually improve iSecurity and allow our users maximum convenience and control of the system - with minimum overhead".

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, headquartered in Nanuet, New York, is the leading security solution provider for IBM's System i (AS/400) computers. Drawing upon its more than 25 years of expertise in the Power i Performance and Optimization market, the company designs, develops and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
