

Successful Implementation of iSecurity View at Bridgestone Australia

Herzliya, Israel – October 19, 2010 - [Raz-Lee Security](http://www.raz-lee.com), a leading supplier of information security solutions for IBM Power i servers (iSeries, AS/400), has announced that Bridgestone Australia Ltd. (www.bridgestone.com.au), a leading supplier to the Australian automotive industry, has been using iSecurity View for a number of years in order to mask sensitive business-critical application data both on the record level and on the field level.

View at Bridgestone operates on business-critical files, including sales transactions and transaction history data, related to a home-grown Sales, Inventory and ERP application. View is used to restrict access at the record or row level as OEM sales transactions to car manufacturers are sensitive information which must be restricted to authorized personnel only. View is used to define the permitted levels of access to such transaction data.

In Bridgestone Australia, “national costs” are sensitive data which require restricting access to authorized personnel only. In addition, such national costs data should not be accessible from non-application related queries, inquiries, etc. For such cases, View assists Bridgestone Australia in restricting field-level access only to certain fields or columns.

Mr. Peter Loewenthal, Integration / POS Manager, at Bridgestone Australia and the person responsible for the selection, implementation and ongoing use of View says that View is an easy product to set up and control in both the GUI and green-screen environments. The product was configured in the company’s test environment and migrated to production after thorough testing. There were some initial minor support issues which were resolved quickly and to the satisfaction of Bridgestone Australia.

"The successful implementation of View at Bridgestone Australia and other leading enterprises worldwide underscores the market need to easily mask sensitive data both at the record and field levels," said Eli Spitz, VP Business Development, Raz-Lee Security. "View is easily configurable, enabling the quick evaluation of the product for answering to companies data access requirements."

About Bridgestone Australia Ltd

The Bridgestone Australia Ltd. Group is a major supplier to the Australian automotive industry, employing in excess of 1,000 people nationwide. The company is best known as a tyre wholesaler and retailer. The company is a wholly-owned subsidiary of Bridgestone Corporation of Japan, the world’s largest tyre and rubber company.

Bridgestone Australia Ltd. has a proud tradition of innovation and development, resulting in products that set new standards for quality and performance. This has been further enhanced with the acquisition of Bandag Manufacturing in 2000, which has provided Bridgestone with access to a quality truck retread product to complement the Bridgestone range of new tyres.

At the same time the company continues its long-held tradition of providing value and excellence to its customers.

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security, with headquarters in Nanuet, New York, is a leading security solution provider for IBM's Power i (AS/400) computers. Drawing upon its 27 years of expertise in the Power i Performance and Optimization market, the company designs, develops, and markets a comprehensive suite of advanced security software solutions - iSecurity.

Raz-Lee's iSecurity product suite is field-proven and has been successfully implemented in over 30 countries. iSecurity features three product sets: the Prevention pack, a complete security solution covering user/password management, anti-virus protection, detection of harmful events, protection of workstations and more; the Compliance pack, which comprises auditing and compliance solutions, providing automatic reporting security related information; and the Application Security suite, which provides information on all changes in business-critical data using real-time alerts and timeline reports.
