## Complete Threat Prevention Solutions for IBM i Servers

Raz-Lee has developed security solutions for IBM i servers (as400) to help you defend and protect your company against external and internal threats by controlling the access, management, and monitoring of security on the IBM i.

Raz-Lee's iSecurity cyber and security threat prevention products provide complete end-to-end Intrusion Detection and Prevention for the IBM i. The iSecurity suite of products helps companies meet their IBM i security and regulatory requirements by providing best-in-class Exit Point Monitoring Integration, Anti-Virus protection of the IFS for malware as well as command line access security.

Each module in our comprehensive security solutions for IBM i is designed to work independently or collectively to secure remote access, control user authorities, prevent viruses, and secure objects.

## The Challenge of Multi-DB Access from within the IBM i

As your enterprise applications expand in database requirements and complexity, so does the need to access multiple databases from your main application server. Current methods of accessing specific files on a remote database from within the IBM i require considerable time and resources.

If you aren't willing to transfer large batches of files (using FTP) to get to specific data, you'll need to implement a complex solution that requires additional middleware, doesn't use SQL statements or integrates with IBM's Call Level Interface (CLI) that relies on complicated APIs and which provides only partial functionality.

DRDA (Distributed Relational Database Architecture), which only connects DB2-like databases, limits the possibility of accessing databases that support JDBC, one of the most common methods for inter-system data access

# Evaluation, Reporting & Alerts

---

## Complete Analytics Solutions for IBM i Servers

System weaknesses that can be exploited by hackers, can disrupt systems and business as well as expose sensitive or personal information.

It is important to evaluate your IBM i system's internal control design and effectiveness. This includes, but is not limited to, efficiency and security protocols, IT governance, and compliance levels to ensure the highest levels of security and auditing possible.

Raz-Lee has developed several evaluation, reporting and alert solutions for assessing security risks, analyzing data and presenting actionable information to help executives, managers and other corporate end users make informed business decisions.

## Compliance Assessment at a Glance

Imagine that each morning, when you reach the office, a customized compliance information sheet awaits you. With all this information available, you can easily ask your IT Manager to explain particular issues (rather than periodically having the IT manager manually check compliance status).

iSecurity Compliance Evaluator offers managers, auditors and administrators a quick yet comprehensive view, analyzing the compliance of their Power i systems with PCI, SOX, HIPAA and other regulations.

With Compliance Evaluator, managers can easily produce any number of compliance checklists, choose the contents and structure of the result, and attach different weights to each item. Compliance Evaluator can be scheduled to run automatically, and its results can be emailed directly from the IBM i to the relevant person.

# Protection is the Solution

---

## Ensure your IBM I Server Security

Nowadays every Server has connections not just to a LAN, also has a bridge to the internet and other networks, this way connectivity has opened a security breach.

But we are ready to keep your IBM i Server as Safe as it is supposed to be, with native tools to work on directly for your benefit.
